Project: Comparing real life season statistics of soccer players to their individual ratings in the corresponding FIFA video game year

* **E**xtract: your original data sources and how the data was formatted (CSV, JSON, pgAdmin 4, etc).

- <https://www.kaggle.com/stefanoleone992/fifa-20-complete-player-dataset> (CSV)
- <https://data.world/cclayford/statbunker-football-statistics> (CSV)

* **T**ransform: what data cleaning or transformation was required.

- Only selecting the necessary columns
- Dropping NaN values
- Changing NaN values to 0

* **L**oad: the final database, tables/collections, and why this was chosen.

- Tables
 - Joins can be used effectively to query the data to compare FIFA video game attributes to real life statistics
